

He kernel security full version contains all function modules, the client is developing software applications for embedded network monitoring equipment, applicable to the embedded network hard disk video recorder, hybrid network hard disk video recorder, network storage devices (CVR), network video server, NVR, IP Camera, IP Dome and decoding devices, cloud services, such as alarm host, visual intercom equipment, support real-time preview, remote configuration, equipment parameters, video storage, remote playback and download, alarm information receiving and decoding control linkage, TV wall, logs, query and other functions.

He kernel security video surveillance management platform to provide system function module, the module name and function introduction is as follows, please choose to install according to the specific requirements:

(1) the client: management equipment and other modules of the core module, including equipment management, playback, preview, TV wall, electronic maps, and other functions.

(2) the streaming media server: concurrent processing, through the server forwarding real-time audio and video stream, a reasonable and effective to reduce the bandwidth of the front-end coding equipment pressure.

(3) storage server, video server, used for storage and backup video features

(1) equipment activation mechanism, support password reset, increasing the administrators, and other functions.

(2) the support of cloud services to add, delete, preview, playback equipment.

(3) the linkage point to support other monitor point, linkage alarm linkage function will be improved.

(4) support online equipment search function, support codec equipment network parameters change.

(5) the main preview, electronic maps, TV wall, such as flexible module can drag and drop, realize the display and control.

(6) support big because NVR, support the back-end hard disk video recorder function.

(7) to support the management of the alarm host, visible interphone.

(8) support for h. 265, h. 264 preview playback.

(9) support onvif standard protocols, compatible with hai kang, dahua, and most of the manufacturers to monitor products.

(10) maximum support 64 pictures online at the same time, the video playback support biggest 16 images. Agreement, compatible with hai kang, dahua, and most manufacturers to monitor products.
