

If you get this message: "Navigation to the webpage was canceled"

You need to 'Unblock' the CHM file before opening it:

1. Right click the file and select Properties
2. Click the Unblock button on the General tab

Consider getting a 3rd party (freeware) tool for viewing .chm-files. These allow you to

- zoom
- bookmark pages
- have multiple tabs

and other comforts that the built-in Windows viewer does not offer.
